309L STAINLESS STEELS

Alloy type

24%Cr-13%Ni (309L) austenitic stainless for dissimilar joint buffer layers etc.

Materials to be welded

Mainly used under high dilution conditions, particularly dissimilar welds between stainless and CMn steels.

Applications

There are 3 main areas of application:

Buffer layers and clad steels: Overlays on CMn, mild steel or low alloy steels and for joining 304L/321 clad plate. Subsequent layers are deposited with an electrode chosen to match the cladding, eg 308L, 347.

Dissimilar joints: Tolerance to dilution is exploited in joining stainless types 410, 304L, 321 and 316L to mild and low alloy steels such as stiffeners, brackets and other attachments. Service temperatures above 400°C are normally avoided. It is also used for welding 12%Cr 'utility ferritics' such as Cromweld 3CR12, to itself and other steels.

Similar metal joints: Wrought and cast steels of 23Cr-12Ni type (eg ASTM 309 and CH8, BS 309S24 and 309C30) can be welded if the service requirement is corrosion resistance below 400°C. However, for high temperature structural service, weld metal with controlled higher carbon and lower ferrite should be used (**Thermet 309CF** – data sheet C-21).

Microstructure

Austenite with ferrite in the range 8-20FN. The solid wires tend to have lower ferrite than the MMA and FCW consumables, the ferrite falling in the range 8-15FN for the solid wires.

Welding guidelines

Preheat and interpass temperatures depend on base material hardenability. For guidance, no preheat on mild steels; up to 250°C on hardenable steels.

Additional information

There is a Technical Profile on sub-arc welding with 309S92 and also additional information covering the Supercore flux cored wires.

Related alloy groups

The 309Mo consumables (B-51), 307 (E-21) and 29.9 types (E-22) cover similar applications. For high temperature applications refer to the controlled ferrite 309 types (C-21) and high carbon 309H (C-22) for matching high carbon cast alloys.

General Data for all 309L MMA Electrodes

Storage	<p>3 hermetically sealed ring-pull metal tins per carton, with unlimited shelf life. Direct use from tin is satisfactory for longer than a working shift of 8h. Excessive exposure of electrodes to humid conditions will cause some moisture pick-up and increase the risk of porosity.</p> <p>For electrodes that have been exposed: Redry 200 – 300°C/1-2h to restore to as-packed condition. Maximum 400° C, 3 cycles, 10h total. Storage of redried electrodes at 50 – 200°C in holding oven or heated quiver: no limit, but maximum 6 weeks recommended. Recommended ambient storage conditions for opened tins (using plastic lid): < 60% RH, > 18°C.</p>

SUPERMET 309L

General purpose rutile 309L MMA electrode

Product description	<p>MMA electrode – rutile aluminosilicate flux on high purity 304L core wire giving very low typical carbon level. 'Low hydrogen' manufacturing technology ensures high resistance to weld metal porosity. 'Supermet Technology' gives acid rutile operability combined with controlled silicon content for maximum cracking/corrosion resistance. Designed for ease of use, exceptional weld bead appearance and high weld metal integrity, primarily in the downhand and HV positions; smaller sizes offer all-positional operability.</p> <p>Recovery is about 115% with respect to core wire, 65% with respect to whole electrode.</p>

ULTRAMET 309L

All-positional rutile MMA electrode for 309L

Product description	<p>MMA electrode – rutile flux coated 309L electrode on high purity 304L core wire. Ultramet has all the benefits of an advanced rutile flux design – this includes optimum versatility for downhand welding with high cosmetic finish and weld metal integrity; and all-positional welding with the 2.5/3.2mm electrodes including fixed pipework. The 2.5mm electrodes are also designed for open butt root welding.</p> <p>Recovery is about 110% with respect to core wire, 65% with respect to whole electrode.</p>

ULTRAMET B309L

Basic coated 309L MMA electrode for pipe-welding

Product description	<p>MMA electrode – designed and manufactured to give high moisture resistance using a basic flux system and high purity 304L core wire. Ultramet B309L is particularly suited to the most demanding vertical and overhead welding applications including fixed pipework in the ASME 5G/6G position. Under site conditions it is tolerant to adverse wind and drafts.</p> <p>Recovery is about 110% with respect to core wire, 65% with respect to whole electrode.</p>

ULTRAMET 309LP

All-positional pipe welding and root welding electrode

Product description	MMA electrode – rutile flux on high purity 304L core wire giving very low typical carbon level. Ultramet 309LP is a fully all-positional electrode capable of the most demanding fixed pipework applications including ASME 5G/6G. The Ultramet 309LP electrode has also been designed to deposit single-side root runs without the need for a gas purge. The electrode is also suitable for vertical-down welding on thin sheet material. Recovery is about 105% with respect to core wire, 65% with respect to whole electrode.

SUPERCORE 309L, 309LP

Rutile flux cored wires

Product description	Flux cored wires – the wires are made with an austenitic stainless steel sheath and rutile flux system. Supercore 309L combines easy operability, high deposit quality and exceptional weld bead appearance for downhand and HV welding. Supercore 309LP is designed for all-positional welding including fixed pipework. Metal recovery is about 90% with respect to the wire.												
Specifications & Approvals	AWS A5.22			Supercore 309L				Supercore 309LP
